Windows Threat Detection 1

T1566 → Phishing
T1091 → Removable Media

T1133 → External Remote Services
T1190 → Exploit Public-Facing Application → look for misconfiguration of website

Censys Search is an internet asset discovery search engine
- Basically it scans port all over the internet and tells these ports publicly available.

So Basically if don't ~~use~~ use firewall and our ip is publicly open, Botnets tries to brute force our system immediately.
- Then we can detects them with 4625 (failed logon attempt)
